

PVC Pipe Phone

Materials

- 4" section of $\frac{1}{2}$ " or $\frac{3}{4}$ " PVC pipe (you can cut lengths of pipe using a hacksaw)
- 2 elbow joints (same diameter as the PVC pipe)
- PVC pipe glue (optional)

The diameter of the pipe and the length of the pipe section may need to vary according to the ages of your students. A shorter pipe length may work better for younger students.

Instructions

- Attach one elbow joint to each end of the pipe. Often, the phones hold together well without any adhesive, but you can use PVC pipe glue, if necessary.
- You can run the PVC phones through a dishwasher, as needed, to ensure cleanliness.
