What Is the Purpose of the Workbook?

For students
The Workbook supports students in their learning journey with independent or small-group practice opportunities for
• building on their understanding through a variety of questions, tasks, games, and challenges connecting foundational concepts;
• organizing and representing their thinking and understanding; and
• connecting math concepts to their lived experiences.

For teachers
The Workbook helps you support students by
• offering intentional independent and small-group practice ideas, aligned with your curriculum;
• providing additional assessment opportunities and ways to support learning; and
• allowing parents and caregivers an opportunity to see what their child is learning.

How To Use the Workbook
After working through lessons with students
• Identify the practice units that correlate with the lessons you've taught.
• Use the Workbook flexibly, as in-class practice (small-group, collaborative, or independent work).
• Discuss the practice tasks and ensure clarity.
• Identify the open-ended tasks and discuss ways for students to represent their understanding.
• Debrief the tasks and ask students to share their strategies.
• Observe students' level of understanding and build on it through additional tasks.

Reaching All Learners (Differentiated Instruction)
Consider the variety of learners in your classroom and how the workbook can best support them. Key questions to reflect on include:
• Are there certain questions that I want all students to complete?
• Do some students need accommodations?
• Which students might benefit from small-group conversations before starting tasks?
• How can I encourage the use of manipulatives and models (e.g., Math Mats, Base Ten Blocks)?
• How can students use the workbook to recognize their strengths and build a math identity (e.g., self-reflection)?

Curriculum Support
Go to www.pearson.com/ca/en/k-12-education/mathology.html for a detailed alignment of this resource with your curriculum.
How Is the Workbook Organized?

Each unit connects the learning across several lessons.

**What I Know**
- activates prior knowledge of major concepts
- provides pre-assessment of students' understanding and knowledge
- helps you identify students who may need additional support

**Checking In**
- provides opportunities for students to apply their knowledge and understanding of concepts, make connections to math in the real world, reflect and discuss their thinking and strategies, and show what they know

**Connections prompts**
- enable students to create their own notes on connections made visible in the moment

**Bringing It Together**
- allows students to work together to discuss thinking and strategies
- helps students show what they know
- presents many open-ended tasks or games

**What I Learned**
- allows students to reflect on what they have learned and record their understanding
- prompts students to focus on the major understandings and concepts
- provides a snapshot of students' learning

**Connecting and Reflecting**
- connects the learning across a practice cluster with students' lived experiences

Sample student answers are included throughout the resource.
## Contents

**Patterns and Place Value** ................................................................. 1
- Unit 1: Patterns ................................................................. 2
- Unit 2: Counting ............................................................... 8
- Unit 3: Number Relationships .................................................. 13
- Unit 4: Place Value ............................................................ 18
- Connecting and Reflecting .................................................... 23

**Addition, Subtraction, and Equality** ................................................. 24
- Unit 5: Addition and Subtraction ............................................... 25
- Unit 6: Length and Perimeter .................................................. 31
- Unit 7: Variables and Equations ............................................... 37
- Unit 8: Financial Literacy ...................................................... 42
- Connecting and Reflecting .................................................... 48

**Shape and Space** .............................................................................. 49
- Unit 9: 2-D Shapes and Angles .................................................. 50
- Unit 10: 3-D Solids .............................................................. 56
- Unit 11: Mapping and Coding .................................................. 62
- Connecting and Reflecting .................................................... 68

**Part-Whole Relationships** .................................................................. 69
- Unit 12: Fractions ............................................................... 70
- Unit 13: Time ................................................................... 76
- Connecting and Reflecting .................................................... 82

**Data Management** ........................................................................... 83
- Unit 14: Data Management ..................................................... 84
- Unit 15: Probability and Chance ............................................... 89
- Connecting and Reflecting .................................................... 94

**Multiplication and Division** .............................................................. 95
- Unit 16: Multiplication and Division .......................................... 96
- Unit 17: Area, Mass, and Capacity ............................................ 102
- Connecting and Reflecting .................................................... 109

**Bringing It Together**

### 11 📺 GAME: Closer to 50!

Use a deck of cards with the face cards and jokers removed.

Each of you take 4 cards.

Use the numbers on the cards to make two 2-digit numbers with a difference as close to 50 as possible.

Subtract the numbers.

The player closer to 50 gets 1 point.

Continue until one of you gets 5 points.

**Play again!** This time take 6 cards and make 3-digit numbers!

### 12

A school raised money for a charity.

The first week, they raised $328.

The second week, they raised $213.

How much do the students need to raise in the third week to reach their goal?

---

**What I Learned**

Which models do you use to help you solve addition and subtraction problems?

**12**

A school raised money for a charity.

The first week, they raised $328.

The second week, they raised $213.

How much do the students need to raise in the third week to reach their goal?

For example: $328 + 213 = 300 + 200 + 20 + 10 + 8 + 3$

\[= 500 + 30 + 11\]

\[= 541\]

$750 - 541 = 209$

They still need to raise $209.

---

**What I Learned**

Which models do you use to help you solve addition and subtraction problems?

For example: I like to use number lines because I can take jumps to add and subtract and see all the numbers at the same time.
