

Master 6: Activity 3 Assessment

Matching Lengths

Measuring and Comparing Behaviours/Strategies		
<p>Student measures width instead of length.</p>	<p>Student matches objects in the middle, or does not line up the straw and the object along a baseline.</p> 	<p>Student selects objects that are much longer or much shorter than the straw.</p>
Observations/Documentation		
<p>Student only finds objects that are shorter or only finds objects that are longer than the straw.</p>	<p>Student visualizes the straw and object and compares without measuring.</p>	<p>Student uses the straw to measure and compare the lengths of other objects, aligning the objects along a baseline. Student uses math language to compare the lengths.</p> 
Observations/Documentation
