

Master 55: Activity 18 Assessment Consolidation

Reading and Writing Code Behaviours/Strategies		
<p>1. Student describes the movement from one location to another on a grid, but code is not accurate. Code often contains one extra arrow, as student counts squares instead of steps.</p> 	<p>2. Student describes the movements from one location to the other on a grid and accurately writes code, but struggles to think about how their movements interact with a partner's movements.</p> 	<p>3. Student describes the movement from one location to the other on a grid and accurately writes code, but struggles to add "wait" moves to avoid collision.</p> <p>"Better start over so we don't crash into each other. You go left, and I'll go right."</p>
Observations/Documentation		
<p>4. Student uses guess and test strategies to add movements to their code so that both cars get to the same place at the same time.</p> <p>"I added 2 steps but still go there before you. Let's try again."</p>	<p>5. Student considers how the cars' moves related to each other when writing and altering code, but struggles to describe how the changes affect the outcomes.</p> <p>"Let's act it out and see what happens."</p>	<p>6. Student successfully reads, writes, and alters code and describes how changes to the code affect the outcomes.</p> <p>"Here, my 'wait' move keeps me from crashing into you. Then we don't drive onto the same spot at the same time until we get to park."</p>
Observations/Documentation
