## Activity 2 Assessment

Properties of Rectangles

| Identifying and Classifying Angles |  |  |  |
| :---: | :---: | :---: | :---: |
| Recognizes a rectangle by the number of sides and right angles. <br> "I know that these are rectangles because they have 4 sides and 4 right angles." | Understands that rectangles have opposite sides that are parallel and equal. <br> "A rectangle must have opposite sides that are parallel and equal in length." | Understands that a rectangle has 2 lines of symmetry. <br> "Every rectangle will have 2 lines of symmetry. You could check by folding the shape or by using a Mira." | Uses properties to sort quadrilaterals into rectangles and non-rectangles. <br> "All rectangles must have 4 sides, 4 right angles, opposite sides equal and parallel, and 2 lines of symmetry. A trapezoid isn't a rectangle because opposite sides are not always the same length." |
