

## Examining Your Route

1. Someone joins the walkathon at Checkpoint 2 and continues to the Finish.

Estimate how far this person walked.

2. A participant walks the first 1450 m of your route before spraining their ankle.

a) How far from the Medical Tent are they?

b) At this point, how far away are they from the nearest checkpoint on your route?

3. Create a story problem based on your route and something that could happen on the day of your walkathon.
