

Activity 16 Assessment

Multiplying Decimals

Multiplying Decimals

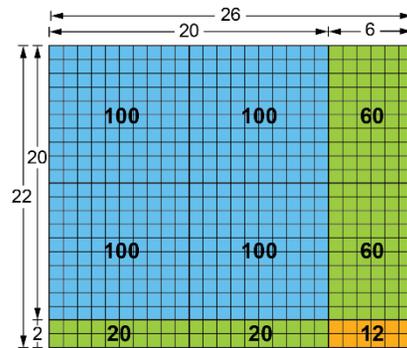

Uses whole number strategies to estimate a product

$$8.3 \times 2.4$$

8.3 is about 8 and 2.4 is about 2, and 8×2 is 16. So, the product is close to 16.

Uses whole number strategies to multiply decimals

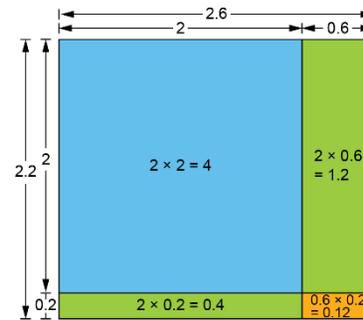

$$2.2 \times 2.6 = ?$$

I used an array on a grid to show an area model.
 26×22
 $= 400 + 40 + 120 + 12$
 $= 572$
 My estimate was 6, so 2.2×2.6 must be 5.72.

Uses estimation to check that the answer to a decimal multiplication problem is reasonable

$$2.2 \times 2.6 = ?$$

2.6×2.2
 $= 4 + 0.4 + 1.2 + 0.12$
 $= 5.72$
 My estimate was 6.
 Since 5.72 is close to 6, the answer is reasonable.

Uses an appropriate strategy or tool to multiply decimals

If rice costs \$3.69/kg, how much would 1.25 kg of rice cost?

I used a calculator and got 4.6125. Rounding to the nearest cent, the rice would cost \$4.61.

Observations/Documentation
