

## Activity 2 Assessment

### Developing Divisibility Rules for 3, 6, and 9

Developing Divisibility Rules for 3, 6, and 9			
<p>Understands and applies a divisibility rule for 3</p> <p>456 is divisible by 3 because the sum of its digits is: <math>4 + 5 + 6 = 15</math>, and 15 is divisible by 3</p>	<p>Understands and applies a divisibility rule for 6</p> <p>Because <math>6 = 2 \times 3</math>, if a number is divisible by 2 (an even number) and it is divisible by 3, then that number is divisible by 6.</p> <p>126 is divisible by 6 because 126 is an even number and the sum of its digits is 9.</p>	<p>Understands and applies a divisibility rule for 9</p> <p>Because <math>9 = 3 \times 3</math>, if a number is divisible by 3 twice, then that number is divisible by 9. The sum of the digits must be a multiple of 9.</p> <p>126 is divisible by 9 because the sum of its digits is 9.</p>	<p>Understands and applies divisibility rules for 2, 3, 4, 5, 6, 8, 9, and 10</p> <p>I know that 7350 is divisible:</p> <ul style="list-style-type: none"> <li>• by 2, because 7350 is an even number</li> <li>• by 3 because the sum of the digits of 7350 is 15, which is divisible by 3</li> <li>• by 6, because 7350 is divisible by 2 and by 3</li> <li>• by 5 and by 10, because 7350 has 0 in the ones place</li> </ul>
Observations/Documentation
