

Activity 5 Assessment

Finding Numbers between Fractions and Decimals

Finding Numbers between Fractions and Decimals

Writes fractions with denominators that are powers of ten as decimals, and vice versa

$$\frac{7}{10} = 0.7$$

$$0.24 = \frac{24}{100}$$

Identifies a decimal between two decimals

There are many decimals between 0.24 and 0.7. I chose 0.55.

Identifies a fraction between two fractions

To find a fraction between $\frac{7}{8}$ and $\frac{4}{5}$,

I wrote the fractions with common denominator 40:

$$\frac{7}{8} = \frac{35}{40} \text{ and } \frac{4}{5} = \frac{32}{40}$$

A fraction between $\frac{7}{8}$ and $\frac{4}{5}$ is $\frac{33}{40}$.

Flexibly Identifies a fraction between two fractions (e.g., a mixed number and an improper fraction)

To find a fraction between $1\frac{5}{6}$ and $\frac{14}{9}$,

write $1\frac{5}{6}$ as $\frac{11}{6}$ then write the fractions with common denominator 18.

$$\frac{11}{6} = \frac{33}{18} \text{ and } \frac{14}{9} = \frac{28}{18}$$

A fraction between $1\frac{5}{6}$ and $\frac{14}{9}$ is:

$$\frac{30}{18} = \frac{5}{3} = 1\frac{2}{3}$$

Observations/Documentation
