

## Answers

17. Answers will vary. Sample answers:

- a) There were 7 heads and 3 tails. Based on theoretical probability, I would expect about 5 heads and 5 tails. So, my answer is not that close.
- b) When we combined with 4 other pairs, we had a total of 27 heads and 23 tails. This is close to what you would expect based on theoretical probability.
- c) You would expect to get about 5000 heads and 5000 tails. I think you will get close to this amount, but not exactly 5000 of each.
