

Activity 7 Assessment

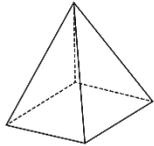

Geometric Properties of 3-D Objects

Geometric Properties of 3-D Objects

Identifies prisms and pyramids

"This is a prism because opposite faces are parallel."

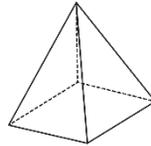

"This is a pyramid because its triangular faces meet at a point."

Identifies the properties of prisms and pyramids

"A rectangular prism has 6 faces, 8 vertices, and 12 edges."

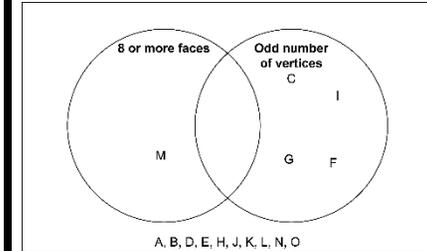

"A square pyramid has 5 faces, 4 of which are triangles, 8 edges, and 5 vertices."

Identifies the properties of a cylinder

"A cylinder has 2 bases that are circles, no vertices, and a curved surface that joins the bases."

Chooses two geometric properties and sorts 3-D objects in a Venn diagram

"The object in the left loop has 8 or more faces. The objects in the right loop have an odd number of vertices. The objects outside the loops have neither property."

Observations/Documentation
