

Activity 4 Assessment

Investigating Perfect Squares and their Square Roots

Investigating Perfect Squares and their Square Roots			
<p>Uses the area of a square to identify perfect squares</p> <p>"25 is a perfect square because it can be represented by a square with area 25 units²."</p>  <p>24 is not a perfect square because it can't be represented by a square."</p> 	<p>Identifies a perfect square using the number of factors</p> <p>"The factors of 16 are: 1, 2, 4, 8, 16 16 is a perfect square as it has an even number of factors. The factors of 17 are: 1, 17 17 is not a perfect square because it has an odd number of factors."</p>	<p>Identifies the square root of a number from a list of its factors and records using square root symbol</p> <p>"The factors of 36 are: 1, 2, 3, 4, 6, 9, 12, 18, 36 $\sqrt{36} = 6$, because 6×6 is the only pair of factors that are equal."</p>	<p>Solves problems involving squares or square roots</p> <p>A square field has perimeter 48 m. What is the area of the field?</p> <p>The side length is 12 m, so the area is $12 \times 12 = 144 \text{ m}^2$.</p>
Observations/Documentation
