## Activity 3 Assessment

Relating Factors, Multiples, and Divisibility

| Relating Factors, Multiples, and Divisibility |  |  |  |
| :---: | :---: | :---: | :---: |
| Understands the term "factor", and identifies the factors of a number <br> A factor is a whole number that divides exactly into another number. A number is a factor of itself. 1 is a factor of all numbers. <br> The factors of 12 are: $1,2,3,4,6,12$ | Understands the term "multiple" and identifies multiples of a number <br> A multiple of a number is the product of that number and another number. <br> Some multiples of 12 are: 12, 24, 36, 48, 60, ... | Applies divisibility rules to determine the factors of a number <br> The factors of 20 are: <br> - 1 and 20, because 1 is a factor of all numbers, and a number is a factor of itself. <br> - 2, because 20 is an even number <br> - 4, because 20 can be divided twice by 2 <br> - 5 and 10, because 20 has 0 in the ones place | Uses the context of the problem to determine whether to identify factors or multiples <br> In the cupcake problem, Aliyah donated 8 cupcakes per batch, and Ben donated 12 cupcakes per batch. They both donated the same number of cupcakes. <br> I need to determine the least number that both 8 and 12 divide into exactly. So, I need to determine multiples of 8 and 12. |
