

Lesson 4 Assessment

Determining the Surface Area of Prisms and Cylinders

Determining the Surface Area of Prisms and Cylinders

Uses nets to calculate surface area by adding the partial areas

I added the partial areas.

Area of rectangle:

$$7 \text{ cm} \times 4 \text{ cm} = 28 \text{ cm}^2$$

Area of 4 rectangles:

$$4 \times 28 \text{ cm}^2 = 112 \text{ cm}^2$$

Area of square:

$$4 \text{ cm} \times 4 \text{ cm} = 16 \text{ cm}^2$$

Area of 2 squares:

$$2 \times 16 \text{ cm}^2 = 32 \text{ cm}^2$$

Surface area of right prism:

$$112 \text{ cm}^2 + 32 \text{ cm}^2 = 144 \text{ cm}^2$$

Uses nets to show relationship between areas of faces and surface area of right prisms and cylinders

Surface area of right triangular prism

$$\begin{aligned} &= \text{area of 2 congruent triangles} + \\ &\quad \text{area of 2 congruent rectangles} + \\ &\quad \text{area of third rectangle} \\ &= 2(2.4 \times 1.6 \div 2) + 2(3.2 \times 2) \\ &\quad + 3.2 \times 2.4 \\ &= 3.84 + 12.8 + 7.68 \\ &= 24.32 \end{aligned}$$

The surface area is 24.32 m².

Determines surface area by visualizing net and adding the areas of its faces

Surface area of right cylinder

$$\begin{aligned} &= \text{area of curved surface} + \text{area of} \\ &\quad \text{2 congruent circles} \\ &= \pi dh + 2\pi r^2 \\ &\approx 3.14 \times 10 \times 17 + 2 \times 3.14 \times 5^2 \\ &= 533.8 + 78.5 \\ &= 612.3 \end{aligned}$$

The surface area is about 612.3 cm².

Solves problems involving surface area of right prisms or cylinders

The dimensions of a rectangular gift box are 8 cm by 7 cm by 9 cm. How much wrapping paper is needed for this gift?

Surface area of right rectangular prism

$$\begin{aligned} &= 2(8 \times 7) + 2(8 \times 9) + 2(7 \times 9) \\ &= 112 + 144 + 126 \\ &= 382 \end{aligned}$$

The surface area is 382 cm². You would need 382 cm² of wrapping paper without overlap.

Observations/Documentation
