## Rotations on the Plane

## Individually:

Draw a quadrilateral $A B C D$ in the first quadrant of the coordinate plane so that one of the vertices is at the origin $(0,0)$.
This is your initial shape.
Using the origin as the point of rotation, rotate your shape $90^{\circ}$ counterclockwise three times. After each $90^{\circ}$ rotation, draw the new image and label its vertices (e.g., $\left.A^{\prime} B^{\prime} C^{\prime} D^{\prime}\right)$. Record the coordinates in the table below.

|  | Rotations on the Plane |  |  |
| :---: | :---: | :---: | :---: |
| Coordinates of Original Vertices | $90^{\circ}$ Counterclockwise | $180^{\circ}$ Counterclockwise | $270^{\circ}$ Counterclockwise |
| A ( , ) | $\mathrm{A}^{\prime}(\mathrm{}, \mathrm{)}$ |  |  |
| B( , ) | $\mathrm{B}^{\prime}(\mathrm{}, \mathrm{)}$ |  |  |
| C( , ) | $\mathrm{C}^{\prime}(\mathrm{}, \mathrm{)}$ |  |  |
| D( , ) | D'( , ) |  |  |

## Rotations on the Plane (cont'd)

Repeat the above, rotating your initial shape $90^{\circ}$ clockwise each time. Draw each new image and label its vertices. Record the coordinates in the table below.

|  | Rotations on the Plane |  |  |  |
| :--- | :--- | :--- | :--- | :---: |
| Coordinates <br> of Original <br> Vertices | $90^{\circ}$ clockwise | $180^{\circ}$ clockwise | $270^{\circ}$ clockwise |  |
| $A(\quad, \quad)$ | $A^{\prime}(\quad, \quad)$ |  |  |  |
| $B(\quad, \quad)$ | $B^{\prime}(\quad, \quad)$ |  |  |  |
| $C(\quad, \quad)$ | $C^{\prime}(\quad, \quad)$ |  |  |  |
| $D(\quad, \quad)$ | $D^{\prime}(\quad, \quad)$ |  |  |  |

How have the original coordinates changed?

Rotations on the Plane (cont'd)

## As a group:

Take turns showing each other your initial shape.
Try to predict what the coordinates of the vertices of the image will be for your group members' rotations.

- What patterns do you notice?
- Why do you think these patterns exist?
- Can you create any general rules about rotations around the origin?

| - |  |  |  |  | Y |  |  |  |  |  |  |  |
