## Activity 22 Assessment

Fluency with Multiplication and Division Consolidation

| Determining Multiples and Factors |  |  |
| :---: | :---: | :---: |
| Uses skip-counting or repeated addition to find multiples $4,8,12,16,20, \ldots$ <br> "To find multiples of 4, I skip counted by $4 . "$ | Uses familiar basic facts to identify some multiples and factors $\begin{aligned} & 2 \times 4=8 \\ & 3 \times 4=12 \\ & 10 \times 4=40 \end{aligned}$ <br> "I thought of the multiplication facts for 4 that I know." | Uses efficient strategies to determine multiples and identify all factors <br> "To find factors of 8, I start $8 \div 1=8$ <br> Factors are 1 and 8. $8 \div 2=4$ <br> Factors are 2 and 4. $\begin{aligned} & 8 \div 3=x \\ & 8 \div 4=2 \end{aligned}$ <br> So, $1,2,4$, and 8 are all factors." |
| Observations/Documentation |  |  |
|  |  |  |

## Activity 22 Assessment

Fluency with Multiplication and Division Consolidation

| Determining Multiples and Factors (cont'd) |  |  |
| :---: | :---: | :---: |
| Uses concrete materials to identify prime and composite numbers <br> " 7 is prime because it has only 2 factors, 1 and 7 . 12 is composite because it has more than 2 factors: 1 and 12,2 and 6 , and 3 and $4 . "$ | Identifies common multiples/factors and greatest common factor for a pair of numbers <br> Factors of 24: $\mathbf{1}, \underline{\mathbf{2}}, 3, \mathbf{4}, 6, \underline{8}, 12,24$ <br> Factors of 56: $\underline{\mathbf{1}}, \underline{\mathbf{2}}, \underline{4}, \mathbf{7}, \underline{\mathbf{8}}, 14,28,56$ <br> "The greatest common factor is 8 ." | Solves problems involving common factors and multiples <br> "Choir practice is every 5th day. <br> Gymnastics is every 3rd day. <br> That means choir and gymnastics both happen every 15th day." |
| Observations/Documentation |  |  |
|  |  |  |

## Activity 22 Assessment

Fluency with Multiplication and Division Consolidation

| Fluency of Multiplication and Division Facts |  |  |  |
| :---: | :---: | :---: | :---: |
| Recalls and demonstrates multiplication and divisions facts to $5 \times 5$ <br> "I know that $4 \times 6=24$ and that $24 \div 6=4$. The array shows both facts." | Uses inverse operations to solve multiplication and division problems <br> "I can rewrite $24 \div 6=$ ? as $6 \times$ ? $=24$." | Uses known facts to determine unknown facts <br> "I can use the distributive property to split the multiplication into facts that I know, then add." $\begin{gathered} 5 \times 9=5 \times 5+\frac{5 \times 4}{25+20=45} \end{gathered}$ | Fluently creates and solves whole number multiplication problems with factors to 12 and related division problems <br> There are 96 basketballs with the same number on each of 12 shelves. $\left.\begin{array}{l} 12 \times \square=96, \text { so } 96 \div 12=\square \\ 12 \times 8 \end{array}\right)=96 \text { Or } \begin{aligned} 12 \times 8 & =6 \times 8+6 \times 8 \\ & =48+48 \\ & =96 \end{aligned}$ |
| Observations/Documentation |  |  |  |
|  |  |  |  |
