Patterning and Algebra
Unit 1 Line Master 1

## How Much Does Diego Need?

| Number of Children | Number of<br>Paper<br>Towel Rolls | Number of Feathers | Number of<br>Pieces of<br>Craft Paper | Number of<br>Dried<br>Beans |
|--------------------|-----------------------------------|--------------------|---------------------------------------|-----------------------------|
| 1                  | 1                                 | 4                  | 3                                     | 10                          |
| 2                  | 2                                 | 8                  |                                       |                             |
| 3                  | 3                                 |                    | 9                                     |                             |
| 4                  | 4                                 |                    | 12                                    | 40                          |
|                    |                                   |                    |                                       |                             |
|                    |                                   |                    |                                       |                             |

Complete the table.

Identify the rule that relates the number of children to each type of material.

Write an algebraic expression for each rule.

Use each expression to determine how much of each material is needed for 50 children.
